Research Post-Doctoral Fellow
Curie Institute Paris, France
Group “RNA Biology and Genotoxic Stress”

Two post-doctoral fellow positions are immediately available at the Institut Curie’s Orsay site (CNRS UMR 3348) in the field of RNA biology and genotoxic stress. Our group is interested in the mechanisms by which the post-transcriptional (i.e. polyadenylation, splicing, translation) machineries of gene expression (including mRNA binding proteins and noncoding RNAs) refines the proteomic complexity required for the DNA damage response and permits cells to respond to genotoxic stresses.

We invite applications from highly self-motivated individuals holding a PhD degree in Molecular Biology and expressing a strong interest in the fields of RNA and/or the DNA damage response.

Initial institutional funding is available at least for one year and the applicant will be expected to candidate for external sources of funding.

Selected relevant and recent publications:

Candidates should send their application including a motivation letter, CV and two contact addresses for references to Stéphan Vagner (Stephan.vagner@curie.fr)
